

```

#include <stdio.h>

int main()
{
    char ch;
    int spaces = 0, tabs = 0, newlines = 0;

    printf("Enter text (press Ctrl+Z and Enter to finish):\n");

    while ((ch = getchar()) != EOF)
    {
        if (ch == ' ')
            spaces++;
        else if (ch == '\t')
            tabs++;
        else if (ch == '\n')
            newlines++;
    }

    printf("\nNumber of spaces      : %d\n", spaces);
    printf("Number of tabs          : %d\n", tabs);
    printf("Number of newlines       : %d\n", newlines);
    printf("Total whitespaces       : %d\n", spaces + tabs);

    return 0;
}

```

OUTPUT:

```

Enter text (press Ctrl+Z and Enter to finish):
hello world
this is a test
^Z
Number of spaces      : 4
Number of tabs        : 0
Number of newlines    : 3
Total whitespaces     : 4
